THE RTS ADVANTAGE

Pharmaceutical manufacturing facilities, laboratories and other life sciences environments rely on complex networks of process piping, utilities, ductwork, conduit and mechanical systems. Precise coordination and installation consistency are essential. RTS helps contractors:

- Improve coordination across trades
- Reduce field labor through prefabrication
- Accelerate installation consistency
- Minimize rooftop penetrations
- Simplify maintenance access and future modifications

Supporting Life Sciences Projects from Design through Installation

Quotes and Budget Pricing, Design & Specification Assistance, Wind & Seismic Support Solutions, BIM/Revit Coordination, Prefabrication & Preassembly Opportunities, Constructability Reviews, Custom Engineering & Fabrication Solutions.

1

Roof Guard Rail

- Protect personnel servicing critical process and mechanical equipment
- Improve rooftop safety and OSHA compliance
- Define safe maintenance and service zones

2

Roof Pipe Supports

- Support process, utility and temperature-control piping systems
- Protect roof integrity with non-penetrating options
- Improve organization and long-term serviceability

3

Maintenance Platforms

- Improve access to critical infrastructure
- Create safe, level maintenance work areas
- Support uptime through enhanced serviceability

4

Access Platforms

- Expand access to process, utility and mechanical systems
- Improve movement between equipment arrays
- Enhance safety in high-density rooftop environments

5

Crossover Stairs & Ramps

- Improve access across complex rooftop layouts
- Increase safety navigating piping and other obstacles
- Support efficient maintenance operations

6

Equipment Supports

- Support critical process and mechanical equipment
- Protect roof systems while maintaining stability
- Accommodate large-scale rooftop deployments

7

Duct Supports

- Support critical air distribution and environmental-control systems
- Maintain critical clearances above roof surfaces
- Improve rooftop organization and accessibility

8

Cable Tray Supports

- Support critical power and data pathways
- Protect roof integrity with non-penetrating systems
- Maintain separation and organization of cable systems

Integrated Support Solutions for Life Sciences Construction

1 (888) 243-2669 Email: RTS@eberliron.com

Pharmaceutical manufacturing facilities, laboratories and other life sciences environments require precise coordination across process utilities, mechanical systems, controls and supporting infrastructure. With more than 100 years of experience and six specialized divisions, Eberl Iron Works provides the products, expertise and fabrication capabilities needed throughout construction. From rooftop supports and modular framing to prefabrication and safety solutions, we help improve installation consistency, reduce field labor and simplify execution in complex, highly controlled environments.

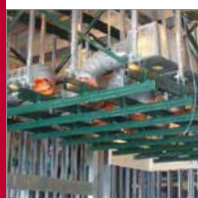

Multi-Trade Racks

Reduce congestion, improve coordination and increase installation consistency by consolidating process utilities and multiple trades into precision-designed, prefabricated rack systems.

Corridor & Instrument Racks

Improve coordination, simplify maintenance and create organized pathways for process utilities, instrumentation and control systems throughout life sciences facilities.

Unistrut Ceiling Grids

Reduce coordination challenges, simplify future modifications, and create organized support infrastructure for critical building systems.

Unistrut Metal Framing

Our extensive Unistrut inventory, fabrication capabilities, and decades of expertise help reduce lead times, simplify procurement, and keep projects on schedule.

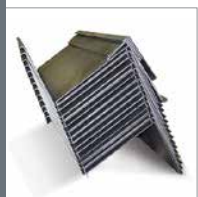

Structural Plate Parts

Reduce field modifications and rework with custom structural plate parts precision cut and fabricated to deliver the quality and consistency contractors depend on.

Safety Guards & Barriers

Fabricated safety guards and barriers help protect personnel, equipment, and critical assets while improving workplace safety and access control.

Stairpans & Treads

Manufactured in-square to save valuable installation time, our stairpans and treads fit cleanly between stringers without the need for additional filler, allowing for faster, cleaner welds.

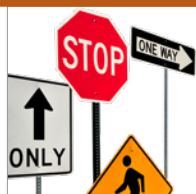

Prefabrication & Preassembly

Reduce field labor, improve installation consistency, and accelerate project schedules through kitted components and preassembled systems.

Barricades & Barriers

Protect personnel, secure critical infrastructure, and improve access control around active facilities and construction projects.

Signs, Sign Posts & Sign Stands

Improve safety, support compliance and clearly identify traffic routes, controlled areas and active construction zones with durable signage solutions.

Metal Bollards

Protect equipment, utilities and critical infrastructure from vehicle impacts while improving site security and reducing operational risk.

Traffic Cones & Drums

Improve safety, reduce risk, and maintain efficient traffic flow around active construction zones and maintenance operations.
